

NovaTech Solutions

Company Background

The company

NovaTech Solutions is a mid-size B2B SaaS company headquartered in Austin, TX. The company employs roughly 200 people and generates approximately \$50 million in annual revenue. NovaTech sells a project management platform to enterprise clients across ten industries: Business Services, Financial Services, Healthcare, Marketing & Advertising, Media & Entertainment, Professional Services, Retail, Software, Technology, and Telecommunications.

Products

NovaTech's product portfolio spans two lines:

Line	Products	Positioning
NovaPulse (core)	Starter, Standard, Professional, Enterprise, Ultimate	Full-featured project management platform — the company's primary revenue driver
NovaEdge (secondary)	Lite, Advanced	Lightweight companion tools for edge-case workflows and smaller teams

List prices range from \$55 (NovaEdge Lite) to \$26,768 (NovaPulse Ultimate). NovaEdge tops out at \$3,393 (Advanced); NovaPulse starts at \$550 (Starter). Actual deal values vary with negotiated discounts.

Go-to-market

- **Sales team:** 30 reps organized into three regions (East, Central, West), each with a dedicated manager. Six sales managers report to the VP of Revenue.
- **Customer segments:** Enterprise, Growth, Professional, Standard, Starter — segmented by account size and contract value.
- **Marketing channels:** Email, Paid Social, Organic Search, Direct Mail, Partner Referral. Six named campaigns run concurrently (e.g., NovaPulse Launch, Enterprise Expansion, Q3 Growth Sprint, Year-End Accelerator, Digital Retarget, NovaEdge Awareness).
- **Geographic reach:** Customers span the Americas, EMEA, and APAC. Marketing leads originate from the US, Canada, Germany, Spain, India, Mexico, Saudi Arabia, and Australia.

Customer base

NovaTech serves 85 active accounts ranging from small startups (< 200 employees) to large enterprises (5,000+ employees). Annual revenue among NovaTech's customers ranges from ~\$4.5 million to nearly \$12 billion, reflecting a broad mix of mid-market and enterprise buyers.

Current challenges

NovaTech's data is siloed across three systems:

- 1. **CRM (Salesforce-style)** — tracks the sales pipeline: deals, stages, reps, win/loss outcomes, and deal values.
- 2. **Marketing analytics platform** — tracks campaign performance: leads generated, channel attribution, spend, and response rates.
- 3. **Support ticketing system** — tracks customer issues: priorities, resolution times, product areas, and customer sentiment.

These systems do not talk to each other. Every Monday morning, the revenue team manually pulls reports from all three tools to answer basic cross-functional questions. This process wastes roughly an hour per week and still leaves gaps — nobody can easily answer questions that span systems, such as:

- "Which marketing campaigns are actually driving closed deals?"
- "Are our highest-value customers also the ones filing the most support tickets?"
- "What's the relationship between campaign channel and eventual deal win rate?"

Key stakeholders

Name	Role	What they need
Sarah Chen	VP of Revenue	A unified dashboard showing the full customer journey — from marketing touchpoint to closed deal to support experience — in one place. Also wants natural-language querying of the data.
Revenue team	Sales managers, marketing analysts, customer success	Self-serve access to cross-functional metrics without waiting for weekly manual report pulls.

Your role

You are a newly hired **Business Intelligence Analyst** at NovaTech Solutions. Sarah Chen has asked you to build a Revenue Intelligence Dashboard using AWS Quick Suite that unifies these three data sources and enables the revenue team to make faster, better-informed decisions.
